DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Ye Ren on 10/15/09.

The application has been amended as follows:

Claims 19 and 27 are canceled.

Claim 16:

A heat shield for use in a gas turbine, comprising:

a support structure that extends in a peripheral and axial direction;

a plurality of heat shield elements arranged on the support structure abutting each other in a peripheral and axial directions of the supporting structure and having an axial gap and a peripheral gap between the heat shield elements;

a plurality of first sealing elements, disposed between the heat shield elements, that seal the peripheral gaps; and

a plurality of second sealing elements, disposed between the support structure and the heat shield elements, that seal the axial gaps,

Art Unit: 3741

wherein the second sealing elements that seal the axial gaps are at a different distance from the support structure than the first sealing elements that seal the peripheral gaps; and

a plurality of first element retainers securing the heat shield elements to the support structure in the peripheral direction of the support structure; and

a plurality of second element retainers securing the heat shield elements to the support structure in the axial direction of the support structure, the second element retainers configured to also retain the second sealing elements in the axial gaps.

Claim 20:

The heat shield according to claim 49 16, wherein...

Claim 22:

The heat shield according to claim 48 16, wherein...

Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance: regarding claim 16 the closest prior art is US 5,431,020 to Maghon. Maghon teaches a heat shield with a support structure, and a plurality of heat shield elements a plurality of first sealing elements in peripheral gaps. However, Maghon fails to teach a first plurality of sealing elements in the peripheral gaps and a plurality of second sealing elements in the axial gap and therefore fails to teach the seals at different distances from the sealing elements to the support structure, as well as element retainers necessary for the sealing elements. US Patent application 2003/0079475 to Schmahl et al. teaches sealing

Art Unit: 3741

elements for sealing the peripheral gaps as well as element retainers for securing the heat shield to the support structure. US Patent Application 2003/0089115 to Gerendas teaches sealing elements for sealing the axial and element retainers. However, Gerendas fails to teach element retainers that also secure the heat shield elements to the support structure.

Regarding claim 24 the closest prior art is Maghon. Maghon teaches a hot side, cold side, a number of peripheral surfaces, element retainers, and securing sections but fails to teach a recess formed in the corners of the heat shield element where the cold side and the axial peripheral surface intersect which, when assembled with other heat shield elements, forms a second, larger recess.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
